

## Chippewa Valley Orthopedics Case Study – Hoeft Builders

Chippewa Valley Orthopedics, a high quality orthopedic care facility in Altoona, WI, has been functioning in Western Wisconsin for over 45 years. When they outgrew their space and decided to create a new one; their cabinetry requirements had a wide variety of very specialized casework. Eau Claire General Contractor, Hoeft Builders, recognized the challenge and turned to WB Manufacturing for their casework needs.

WB Manufacturing supplied cabinetry and work surfaces for the nurses' stations; casework for storage rooms, exam rooms, specialized medical rooms, and employee break rooms; and even lockers for the employees.

When changes occurred WB Manufacturing was able to adjust to the alterations and provide high quality, timely work. WB Manufacturing's President and others from the WB team were active on the job site and ensured that the best work possible was provided.

WB's high end finishes melded with the high end facility and provided Chippewa Valley Orthopedics with a space that was comfortable for their patients and functional for the facility.

*"A lot of people can give you a box cabinet straight off the shelf- standard sizes, standard everything. But every building isn't going to be standard and there is going to be changes. This was a good example of that building ... WB did a great job for us."*

*Jay Rideout  
Vice President of Operations
